
Jason Integrity™ Whirlpool Jets

Flow Adjustable Directional Jet

Rotating & Flow Adjustable Back Jet

Flow Adjustable Foot Jet

All Integrity™ whirlpool baths come equipped with color-coordinated, flow-adjustable, directional jets and one rotating back jet. End drain baths also feature two flow-adjustable foot jets.

The standard, flow-adjustable, directional jets can be aimed toward specific areas of the body and the flow adjusted for your comfort by rotating the flange on the outside of the jet body.

The rotating back jet and foot jets can also be flow adjusted by turning the outer flange, but are directionally fixed.

The rotating back jets are interchangeable with the directional jets and additional cartridges can be

purchased to replace any standard directional jet if desired.

Integrity™ directional jets and foot jets are color matched to Jason's standard acrylic colors of Classic White, Natural Bone, and Bisquite. The flange of the rotating back jet is also color matched to Jason's standard acrylic colors but the internal rotating element is clear.

Jason Integrity™ jets are available with optional outer flanges in Polished Chrome or Bright Brass. These will be supplied with clear therapy jet nozzles and clear rotating back jet elements.
